

Week 2 – Day 02 Home Assignment

S06 – Transcription. Generating text from the video file uploaded.

The screenshot shows a REST client interface with a POST request to `https://api.gemini.com/openai/v1/audio/transcriptions`. The request body is a multipart form data containing a file named `Meeting Recording.mp3` and a `model` parameter set to `whisper-large-v3`. The response is a JSON object with a `text` field containing a transcription of a meeting.

```
POST https://api.gemini.com/openai/v1/audio/transcriptions

{
  "model": "whisper-large-v3",
  "file": "Meeting Recording.mp3"
}
```

```
{
  "text": "Hi! Here, I'm going to run the daily stand up meeting today. We can get started. Morning hari, morning Sridha, Radhakrishnan here. So yesterday I've been assigned with a couple of tickets related to balance transfer. So I have written manual test cases initially for that and got it signed off from the QA and PO in our team. And since the latest build is now available in QA, I have started testing these scenarios and monitoring how the system behaves for the different scenarios. So far, the system is good and there are no any defects and if there are any, I will raise it accordingly and once the execution is done, I will focus on converting those steps into automation scripts and see how it goes. So that's the update from my side. Thanks. Thank you Radhakrishnan. Good morning everyone. Sridha here. Yesterday I have completed smoke and regression testing for the payments module and got defects in Jira. And today I will be continuing manual testing for the reports module and automating the transaction history flow in Selenium. And there is no blockers so far and waiting for a new build to proceed with parallelization. Is that's all for my update. Thank you, Hari. Thank you, Sridha. Thank you, guys. Thanks for your update. Thanks, everyone. Thank you."}
```

S09 – TextFromImage-base64-Home Assignment

The screenshot shows a REST client interface with a POST request to `https://api.gemini.com/openai/v1/text-to-image`. The request body is a JSON object with a `prompt` field containing a description of an image and a `image_url` field containing a base64-encoded image.

```
POST https://api.gemini.com/openai/v1/text-to-image

{
  "prompt": "A landscape with a large, ancient tree in the foreground, a small building in the background, and a body of water in the distance.",
  "image_url": "data:image/jpeg;base64,..."
}
```

A screenshot of a web browser's REST client interface. The URL bar shows 'https://api.grocy.com/grocy/tauto/speech'. The 'POST' method is selected. The 'Body' tab is active, displaying a JSON object:

```
{  'model': 'google/lat/realtime-1.0',  'text': 'welcome all! we are absolutely thrilled to have you here with us. You are joining a passionate community of developers and creators who are all working toward the exact same goal: making a meaningful impact.',  'voice': 'aura-1',  'timestamp_format': 'iso'}
```

 The 'Send' button is visible. Below the client interface, a video player is shown with a progress bar at 0:14 / 0:14.
